

## Use efficient shower heads

Can save up to 50 % energy and water

## Check your fridge settings and surrounding

Don't place your fridge next to the oven! Every degree less in the ambient temperature lowers the consumption by 3%

## Check the consumption of your old appliances

Appliances get more efficient every year. Check the currently available offers for all appliances older than 10 years. Anything older than 15 years should probably be replaced.

## Keep your heating system well maintained.

---

Gas furnaces and other heating systems run significantly more efficient if they were maintained recently. Ask your contractor to have look at your heating pump.

## Insulate your radiators.

---

Insulating the back of old radiators is an  
easy fix to keep the warmth in the  
apartment.
